

1 PRIORITY-DRIVEN DITHER.

2 ABSTRACT

3 The present invention presents halftoning techniques for
4 printers and solves problems related to halftoning so as to
5 render a combination of text and image areas in a pleasing
6 manner. An advantage of this technique is that it gradually
7 switches from text rendering to picture rendering in a manner
8 which is locally adaptive over small regions, (say 3x3 pixels).
